

## Identify your patient is being ruled out for COVID

\*Via chart review or when checking with RN prior to seeing your patient

Given that COVID -19 testing results are received within 24 hours, as of 3/19/20, these are the guidelines. They may be modified as conditions change.

### If they are being ruled out:

- put in an attempted visit note using .OTCOVID or .PTCOVID (see at footer)
- Do not acknowledge the order

Follow up the next day to view COVID test results

Positive for COVID

Negative for COVID

Vet reason for consult with provider to determine therapy specific needs:

- Did you identify a therapy need?

See patient per standard care practice

Yes

No

- Utilize recommended PPE
- Care for patient per standard practice

- Hold patient
- put in attempted visit note indicating discussion with provider took place and there were no therapy needs identified

Referral received and chart reviewed. Patient is currently being ruled out for COVID. Will follow up with provider when test results are confirmed to determine therapy needs.
